Easttown
East Brandywine
Phoenixville Green Team
West Chester Green Team

Environmental Advisory Councils

Why the NCC - EAC

A way to share common ideas, common issues, successes, and challenges. Working together toward larger regional goals. Coordinating individual events with a larger interested audience.

The last large, unbroken forest left in southeastern Pennsylvania, Hopewell Big Woods is one of the most important natural areas in the region. Hopewell Big Woods is an exceptional resource with hundreds of plant and bird species, pristine forest, unique wetlands, and clean streams, providing open space, drinking water, and unique scenic, cultural, and natural resources.

This conservation area encircles French Creek State Park and the Hopewell Furnace National Historic Site, and is greatly valued as an asset for public recreation. An expanse of over 73,000 acres, or 110 square miles, Hopewell Big Woods is a rarity in our landscape.

Environmental Advisory Councils

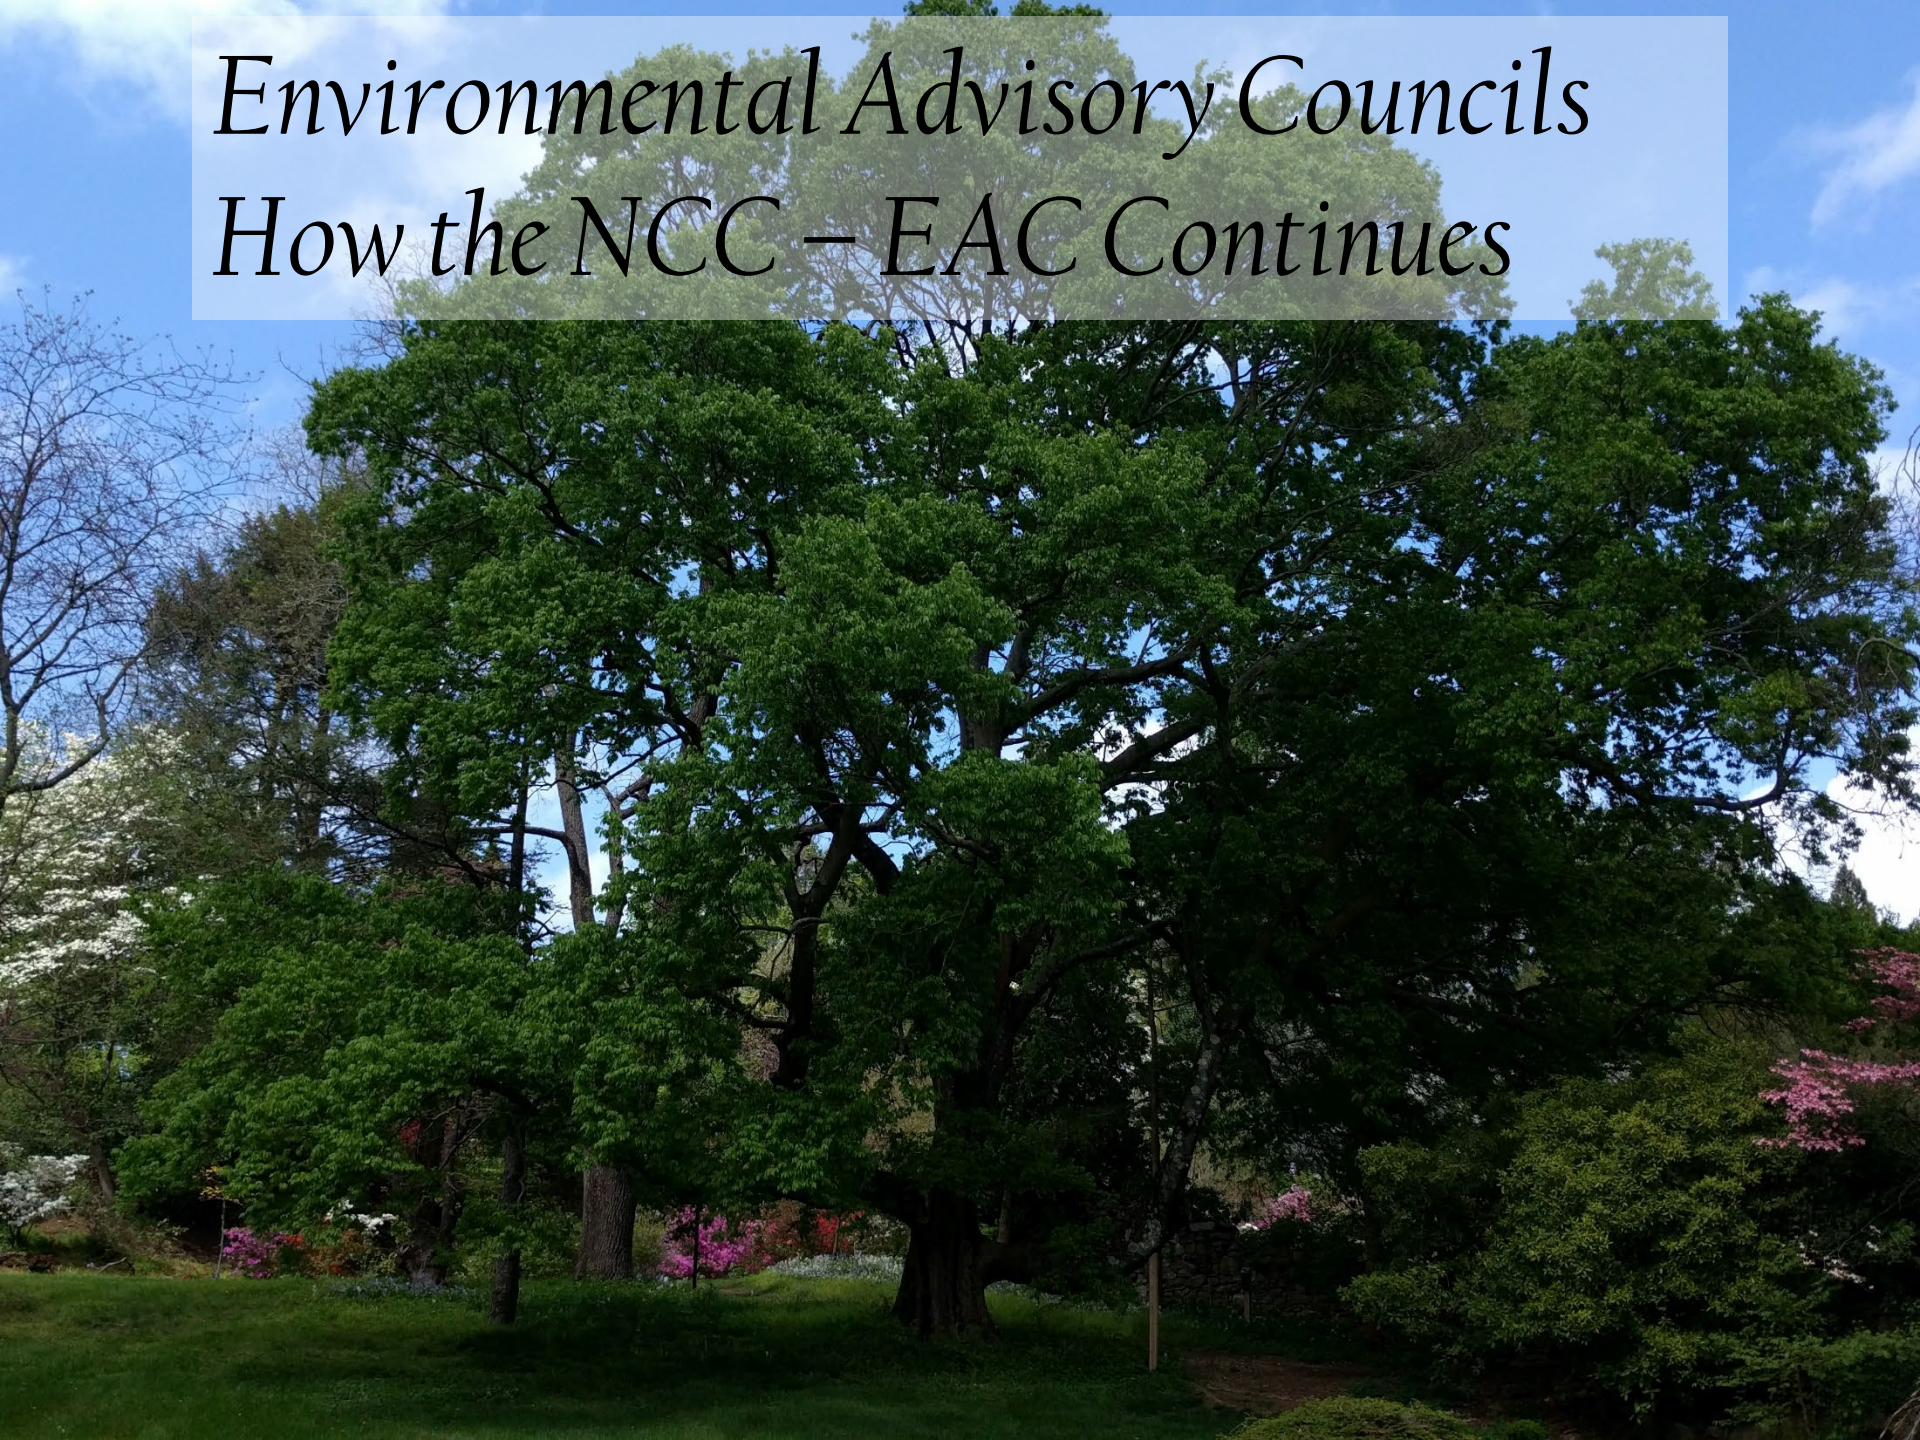

How the NCC – EAC Started

In 2019, as West Vincent EAC chair and Executive Director of Green Valleys Watershed Association, I thought it would be great to have our area EACs meet and share experiences. Our first meeting in person was held at the West Vincent Elementary School.
